

An innovation of anti-theft lock system to ensure car safety & comfort for automatic and manual transmission vehicles

CB-545 : 3 LOCK steering column lock

Slide Arm

To lock, just pull the arm, the first & second locks will be engaged simultaneously within a second.

Lock Casing

When you pull the slide arm the u-block casing will move up and cover the safety clamp preventing the steering column from turning the steering column will be free as usual again when the first and second locks are unlocked (including the third lock if applied).

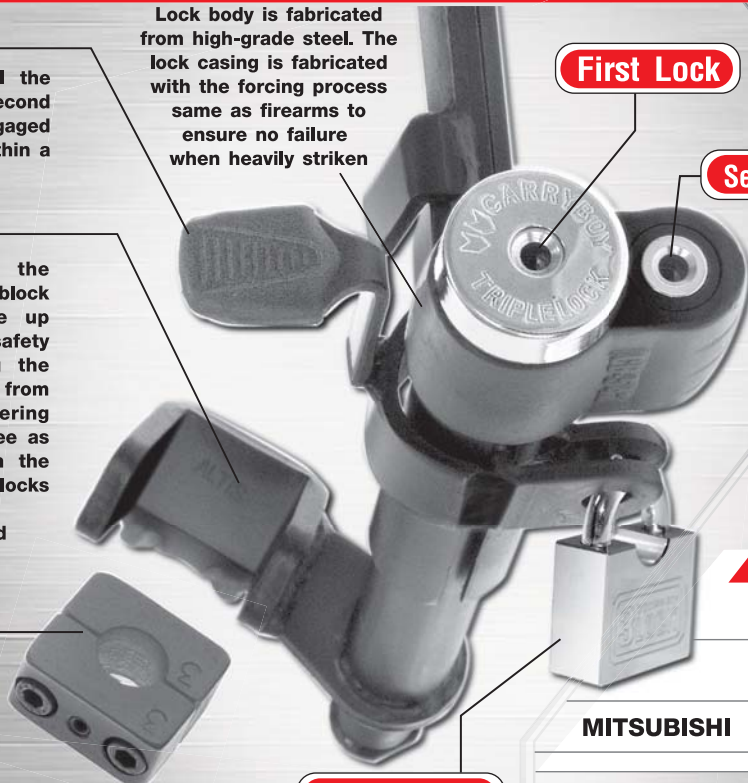

Safety Clamp

To be installed permanently at the steering column bolts and fixed with screws and safety pin.

Key

One key useable for all 3 locks. A spare key is provided in case of loss or forgetting the key.

Lock body is fabricated from high-grade steel. The lock casing is fabricated with the forcing process same as firearms to ensure no failure when heavily striken

First Lock

Second Lock

Third Lock

Spare Key

Pocket Spare Key

How the 3 Lock Works

The three lock is designed to be installed permanently to the vehicle steering column to ensure safety to the driver.

Three Lock works as the best anti-theft system because of it's three locking action. The lock is fabricated from high tensile steel resistant to any hacksawing or forced entry attempts. It's 9 rings core code lock system denies any faked key, lockpicking or drilling attempts.

Product available for both left & right hand drive

NISSAN	HONDA
FORD	TOYOTA
MITSUBISHI	ISUZU
	MAZDA

Pictures after installation of CARRYBOY 3 LOCK

At the front console

Smart and convenient only the lock end and slide arm will be exposed just for unlocking and locking

At car floor-under console

- Installed permanently to the steering column. Convenient & ready to use at all time.
- Car floor is free from bars or levers, no annoyance while driving and **safe even if you forget to unlock because the brake pedal can still operate.**

Patented Under Registration No.03030D0176
